**Maggie Campbell Pedersen : Gem and Ornamental Materials of Organic Origin** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Gem and Ornamental Materials of Organic Origin:

0 of 0 people found the following review helpful. Five StarsBy CustomerGood and fast service, thank you!1 of 1 people found the following review helpful. In depth discussion full of photosBy Stonelore GemsThis book is a must have for the gemology student. This is a book I keep at hand for identifying and distinguishing non-mineral ornamental materials.0 of 0 people found the following review helpful. few books cover this topic so wellBy CustomerGreat book for the gemologist, appraiser, or collector who loves organic materials. Well-researched and lots of excellent photos. Every gemologist needs this book.

Gem and Ornamental Materials of Organic Origin is a unique source of information on this neglected topic of gemology. Presented in full color, with over 200 stunning photographs for ease of reference and identification, the book allows material to be recognized by sight, avoiding the usual gemological tests, which can ruin them. A comprehensive list of materials is included and each is presented with details of its origin, availability and conservation status. Examples of the uses of each material are given, along with a brief history of their use.

"Chock full of interesting facts... A comprehensive and clearly written guide to organic materials... a volume of genuine use to dealers, collectors and museum curators.' Antiques and Collectables 'This book is the most comprehensive, in-depth, and scientific examination of these materials to date.' Gems and Gemmology 'I have not found a reference book that has more data on this subject... it is a mandatory item for every appraiser's reference library.' The Jewelry Appraiser" About the Author Maggie Campbell Pedersen has more than 30 years experience in photography, specializing for the past twenty years in gemstones and jewelry. She has also spent eight years working in gemological research, specializing in gem materials of plant and animal origin and teaching in this subject.
